## Over view

The SVP™AX family video processors are highly integrated system-on-a-chip devices for providing the highest performance, targeting the converging HDTV-ready and PC-ready LCD TV, PDP TV, and DLP TV applications where high precision processing of video and data are the requirements. SVP™AX contains triple 10-bit high precision and high speed video ADCs for both PC and video inputs, the high speed HDMI could support all HDMI inputs up to 162 MHz with HDCP format, the high-performance multi-format 3D digital comb video decoder that supports NTSC, PAL, and SECAM, a HDTV sync separator, and a motion adaptive de-interlacing engine. Trident's DCR™ – the 7<sup>th</sup> generation of Digital Cinema Reality engine, is integrated inside the SVP™AX to provide the most natural cinema-realistic images. The DCR™ technology integrates advanced 3D-comb video decoding, advanced motion adaptive de-interlacing, object-based digital noise reduction, advanced 7<sup>th</sup> generation scaler, film mode support, average picture level (APL), edge smoothing and dynamic sharpness enhancement.

Trident's patented Unified Memory Architecture (UMA) that allows frame rate conversion, 3D comb video decoding, and video enhancement processing to share the same memory buffer that is made up of high-speed and

Cost-effective PC graphic memory. All these advanced digital processing techniques combined with a true 10-bit video data processing for the most optimal video fidelity to provide the most natural and cinema quality video images. Designed for maximum system design flexibility, SVP™AX integrate all video interfaces to support converging digital video, analog video, and PC data applications. The users of Trident's single chip SVP™AX video processor(s) will benefit from many features while maintaining a price competitive advantage over the existing solution(s)

# SVP™ AX PRODUCTOR FEATURES

## ■ SVPTMAX Product Features

### Main Features

#### Brief Description of all features

#### **Integrated HDMi Receiver with HDCP up to 162 MHz (UXGA)**

#### **Integrated 7<sup>th</sup> Generation Motion and Edge Adaptive De-interlacing**

- 7<sup>th</sup> generation adaptive edge smoothing algorithm for enhancing image clarity and sharpness

- Pixel-based motion and edge-adaptive deinterlacing

#### **Integrated ADC**

- High-precision 10-bit ADC mode up to 108 MHz for SD/HD analog video input modes
- Direct support for CVBS/S-Video/Component and HD-D1/D2/D3/D4 modes
- Decode FB and FS signals for fully SCART functions

#### **SRC (Scan Rate Conversion)**

#### **Improvements**

- Motion Detection improvement
- Edge Detection improvement
- 32/22 Detection
- De-interlacing Clarity
- 32/22 Judder improvement
- Vertical scalar after the de-interlacer improvement

#### **Auto Tune**

- Auto phase detection
- Auto mode detection
- Auto white balance
- Auto clock phase adjustment for PC & HD component inputs
- Auto position for PC RGB inputs

#### **Built-in single/dual 8/10-bit LVDS Transmitter**

- Enhanced false color reduction circuitry

#### **Inverse Color Space Conversion**

#### **Interlaced and Progressive Scan Refresh**

- Programmable blank time control—optimal for HDTV format converter application
- Progressive Scan @ 50Hz to 75Hz

#### **Frame Rate Conversion**

- Support frame rate conversion for PC and video mode
- Both free-running and line-lock mode are supported

#### **PWM**

#### **Built-in ADC to decode one FB and two**

#### **Advanced 7<sup>th</sup> Generation Cubic-4 Image Scaling Engine**

#### **DNR-Digital Temporal and Spatial Noise**

#### **Reduction Filter**

#### **Advanced Chroma Processing**

#### **Dynamic Contrast Function**

#### **PCM Engine (Perfect Color Management)**

- Blue Stretch
- HSV Space Color Management
- Hue Gain, Saturation Gain, and Value Gain controlled by luma and saturation separately
- Center enable function could make center of the region with higher gain

#### **RCR (Real Color Reproducer)**

- The hue and saturation can be adaptive to the pixel's grey-level with 8-bit hue and saturation LUT

#### **DCI (Dynamic Contrast Improvement)**

- Histogram detection
- Dynamic Gamma Function
- UV Compensation. Adjust. UV based on Y.

#### **Integrated 7<sup>th</sup> Generation Motion**

#### **Adaptive 3D Digital Comb Video**

#### **Decoder with Programmable Filter**

- Supports NTSC, PAL, and SECAM formats
- Smooth 3D/2D image transition with Trident's proprietary object and motion adaptive detection
- Programmable comb filter adapts to all possible environments, and 2D Y/C separation
- Color edge enhancement circuit improves the chroma transient so that the chroma edge looks sharper than the original signal
- Enhanced NTSC/PAL/SECAM auto detection

#### **FS signals to support dual SCART solutions**

#### **Teletext**

- TCD3 decoder has built-in teletext data slicer that decodes and has an OSD page display up to 4.5K pages at 75Hz
- Supports Teletext 2.5 Specification.

#### **Memory Interface**

- Supports 16 bits DDR memory interface
- Memory clock support up to 250 MHz
- Supports memory size up to 16 Mbytes

#### **DCRE™ Advanced Image Processing**

- Advanced LUMA processing for image enhancement

- White peak limitation
- Black and white extension
- Horizontal and vertical sharpness control
- User Friendly white balance adjustment for both MP and PIP channels
- Advanced linear and non-linear panorama scaling algorithms
- Integrated sync separator with line-locking PLL
- Programmable zoom viewer allows partial still pictures and live broadcast to be viewed in greater detail.
- Gamma correction with 10-bit per color lookup-table
- Picture controls such as hue, saturation, brightness, and contrast can be automatically adjusted to their optimal balance.
- sRGB support

### **Multi Screen Display Modes**

### **OSD and VBI/Closed Caption**

### **Advanced OSD Engine**

- 4/8 bit color OSD display with two planes

- Hardware scrolling for CC and Teletext display

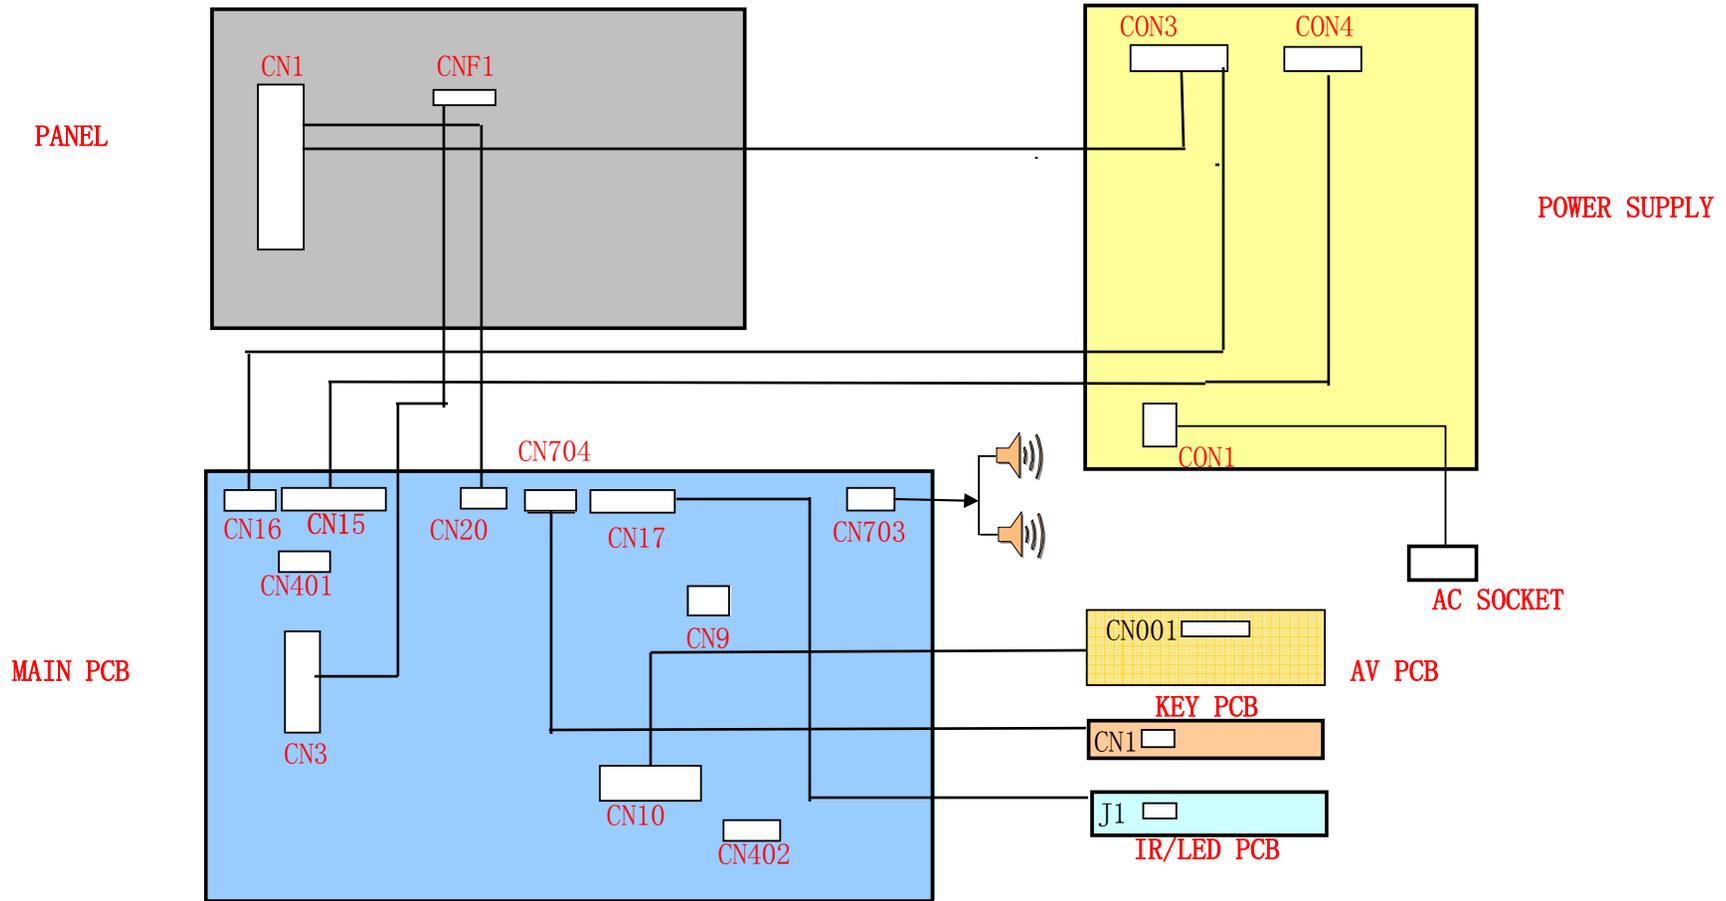

### **Audio**

- Supports the following SIF standards:  
NTSC(M) BTSC, NTSC(M) EIAJ, NTSC(M) Korea, PAL(B) A2, PAL(D) NICAM, PAL(G) NICAM, PAL(I) NICAM, SECAM(K) A2, SECAM(L) NICAM, SECAM-EAST A2, FMRadio
- Supports the stereo, mono, dual and SAP modes
- Supports the SIF and 4 sets stereo line-in analog inputs
- Supports I2S, SPDIF and HDMI digital inputs
- Supports speaker and headphone analog outputs
- Supports I2S and SPDIF digital output
- Supports reverb, 3D, 3 bands EQ, left and right sound matrix, quasi-peak detection, auto-volume control, soft-mute, beeper, lip sync, analog inputs to outputs router and pre-scale.

### **Packaging**

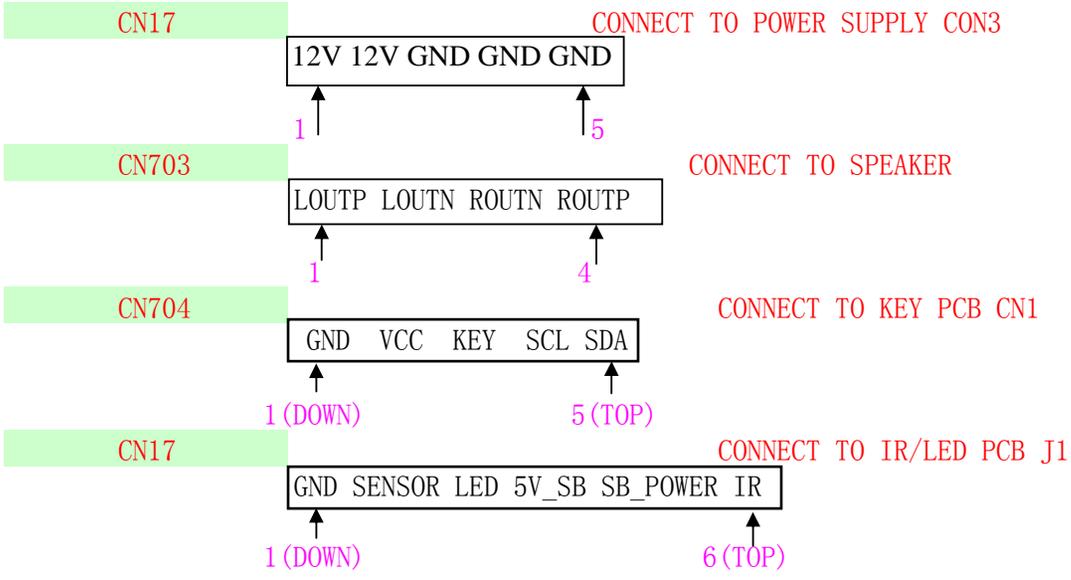

- 256 QFP
- Ordering part number

# AX68 BLOCK DIAGRAM

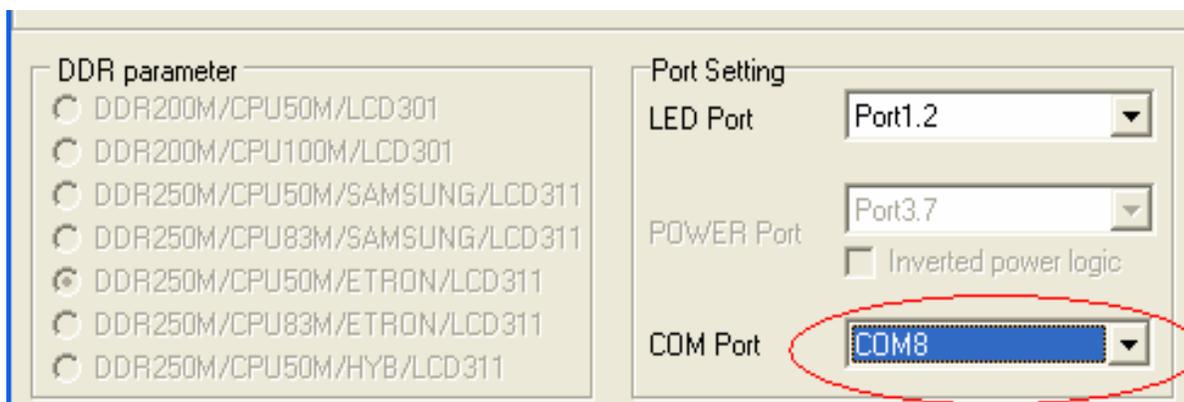

# SW LOADING PROCEDURE FOR AX68

Install "PXSDKToolkitV1.0.6.exe" tool kit  
Install USB driver "CP210x\_VCP\_Win2K\_XP.exe"  
Copy & paste "Uart115200\_RevC Supported" folder on your system  
Connect USB port of SW loading jig to USB port of CPU/Laptop  
Connect VGA port of SW loading jig to VGA port of TV Set

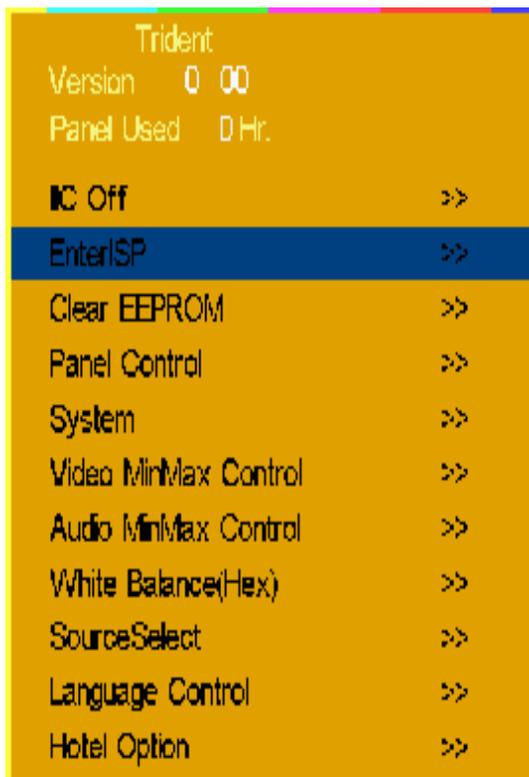

Open AXISP from "Uart115200\_RevC Supported" folder . Press the red flag button , AXISP version is 2.5.0.0

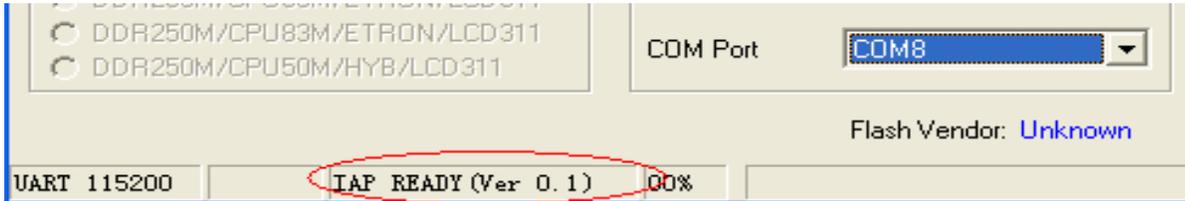

1. Chose the right Com interface.( Recommend COM1)

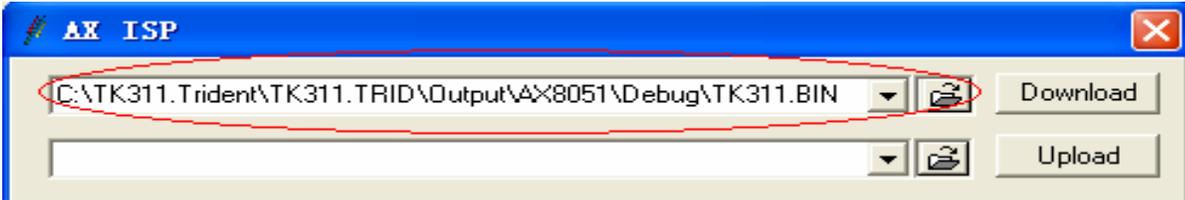

2. Enter factory mode like by pressing Menu ->Vol+ ->Ch'8532 Chose EnterISP option & Press VOI+ key.

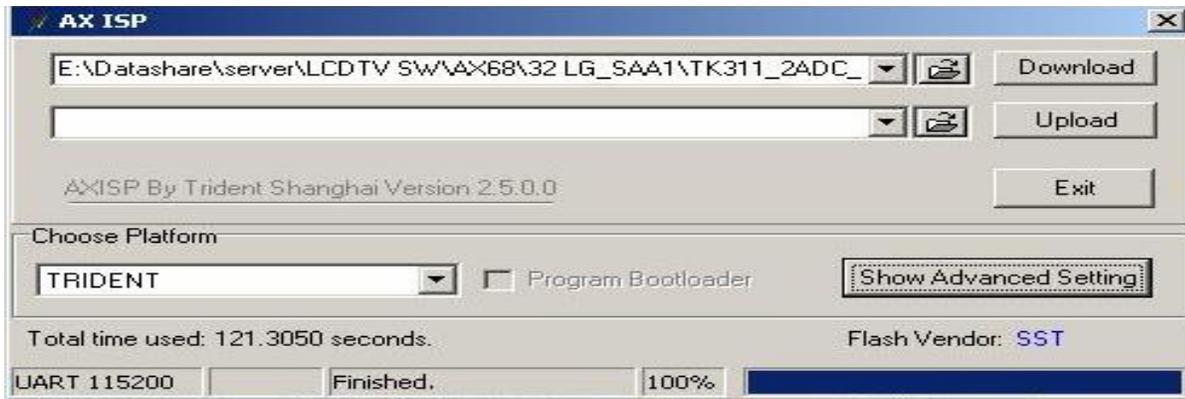

3. It is successful to connect the TV with the display like the red flag on the tool.

4. Browse & Chose the Bin file to download.

5. Press the Dowload button, after completion of process "Finished" will be displayed

# DESIGN DATA FOR AX68 LCDTV SET (26" & 32")

## NOTE :- Design Data may be vary for different Models & Panels.

To enter into design data press MENU key then enter into AUDIO menu + 8532  
 To exit from design data press MENU key

### FACTORY MENU

Version: This shows the version of Software.

Panel Used: This shows which panel is used in the LCD TV set.
